

[Healthcare]

Streamline Your Data. Improve Patient Care.

From clinical notes to imaging archives, unstructured data is core to healthcare operations. Aparavi helps you find what matters, protect it, and make it actionable—supporting better decisions and better outcomes across departments.

[Benefits]

The Next Evolution of Healthcare Data Management

Aparavi helps healthcare providers, researchers, and administrators reduce risk, protect patient privacy, and turn unstructured data into a powerful asset for care, compliance, and innovation.

Protect Patient Privacy
Secure PHI and medical records with role-based access, encryption, and HIPAA-ready protections.

Enable Efficient Care Coordination
Classify and route patient information to the right teams or systems—faster, and with fewer errors.

Simplify Regulatory Compliance
Automate retention and access policies to meet HIPAA, HITECH, GDPR, and other regional regulations..

The Next Evolution of Data-Driven Manufacturing

The Challenge

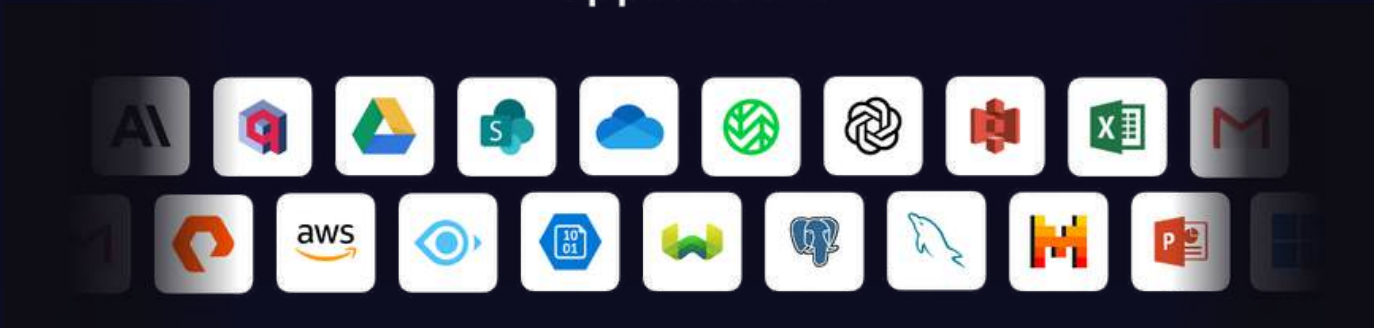

Healthcare organizations handle massive volumes of unstructured data—patient records, lab reports, imaging files, clinical notes, and regulatory documentation—spread across EMRs, legacy systems, email, and shared drives. Manually sorting and securing this data for care coordination, research, or compliance is time-consuming and puts PHI at risk.

The Breakthrough

Aparavi connects to your data sources and intelligently classifies unstructured healthcare information. Extract, tag, and prepare PHI for secure sharing, compliance, and analysis—without disrupting existing systems or workflows.

[Integrations]

1,500+ file types and applications

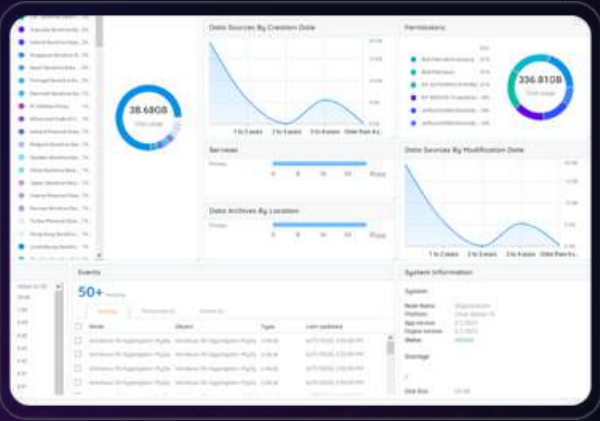

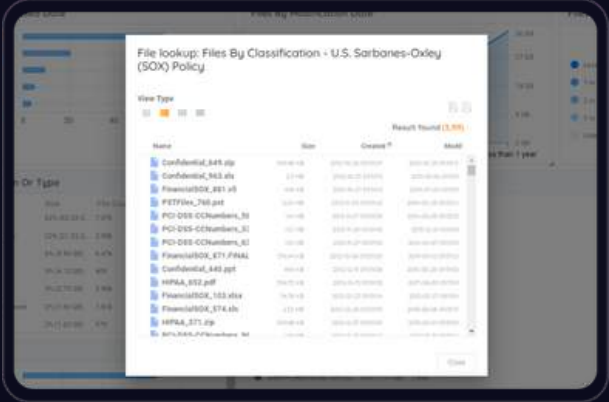

Intelligent Data Classification and Tagging

Healthcare data spans formats and systems—clinical notes, scanned documents, diagnostic imaging, and more. Aparavi intelligently classifies:

- PHI and sensitive records for secure handling
- Redundant or outdated data for cleanup
- Relevant data for routing to EMRs, research systems, or analytics tools

This leads to cleaner data, faster insights, and safer operations.

Seamless Integration with Existing Systems

Aparavi works across cloud, on-prem, and hybrid environments—no need to move or replicate sensitive data.

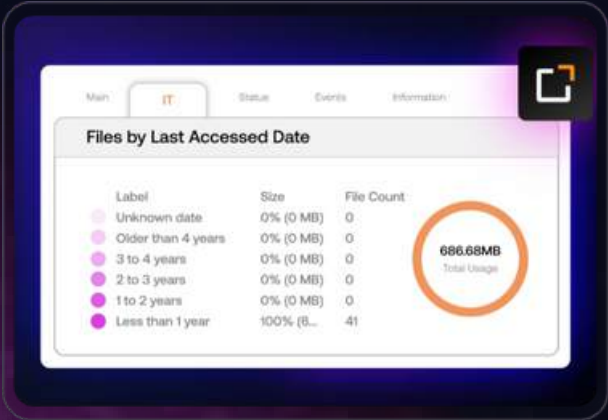

- Connects with hospital networks, EMRs, imaging systems, and endpoints
- Prepares unstructured data for analytics, population health tools, or interoperability platforms
- Automates data tagging and formatting for faster, safer workflows

No downtime. Just better data availability across departments and systems..

Policy-Driven Governance & Compliance Automation

In healthcare, compliance is critical and constantly evolving. Aparavi provides automation that meets the moment.

- Automate retention, deletion, and access control
 - Maintain real-time audit trails and data lineage
 - Monitor PHI exposure and compliance readiness centrally
- Cut costs, reduce legal risk, and give your teams confidence in every decision.

Spend less time sorting through messy data and more time making it work for you.
