

[Legal]

Streamline Your Data. Strengthen Every Case.

From legacy matters to live litigation, legal teams depend on fast, secure access to relevant information. Aparavi helps you surface what matters, ensure compliance, and accelerate your legal workflows—without changing your systems or compromising confidentiality.

[Benefits]

The Next Evolution of Legal Data Management

Aparavi helps legal teams save time, reduce risk, and gain complete visibility into sensitive data across matters, clients, and jurisdictions.

Accelerate Discovery and Review

Automatically classify, tag, and route case-relevant documents for faster intake, search, and review.

Ensure Client Confidentiality

Protect privileged communications and confidential documents with strict access controls and full auditability.

Simplify Legal Hold and Compliance

Automate holds, retention schedules, and defensible deletion policies to align with evolving legal and privacy regulations.

The Next Evolution of Data-Driven Manufacturing

The Challenge

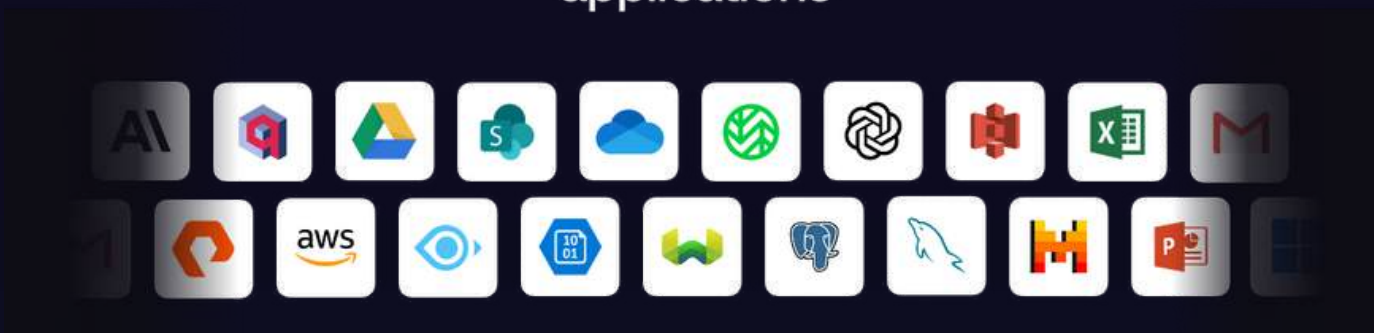

Legal teams and law firms work with enormous volumes of unstructured data—contracts, case files, communications, and historical documents—scattered across file shares, email, and document management systems. Manually locating, organizing, and reviewing this data for litigation, investigations, or compliance is time-consuming, expensive, and high-risk.

The Breakthrough

Aparavi connects to all your data sources and intelligently classifies legal content. Extract, tag, and prepare matter-related data for review, eDiscovery, or archiving—without redundant manual review or the risk of missing something critical.

[Integrations]

1,500+ file types and applications

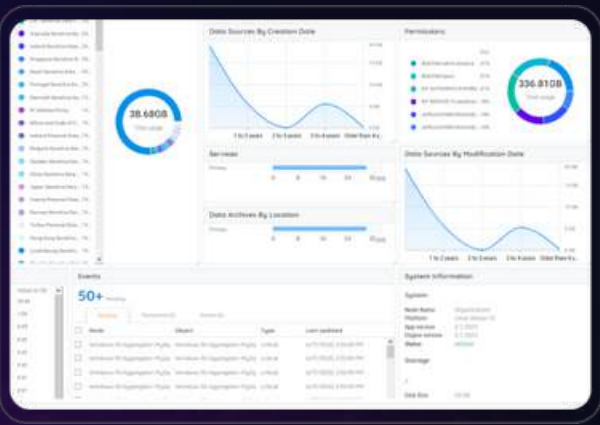

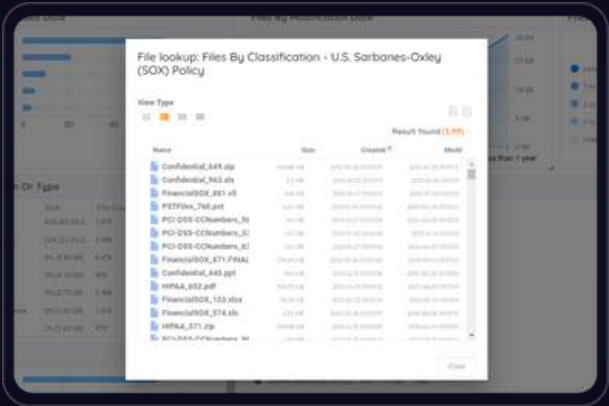

Intelligent Data Classification and Tagging

Legal documents come in many forms—emails, PDFs, contracts, memos, and archived case files. Aparavi intelligently:

- Flags privileged, sensitive, or confidential documents
- Identifies duplicate or outdated matter files
- Routes the right data to case management or eDiscovery platforms (e.g., Relativity)

This enables faster timelines, reduced review burden, and stronger outcomes.

Seamless Integration with Existing Systems

Whether your firm uses Relativity, iManage, NetDocuments, or custom archives, Aparavi integrates directly and works without duplicating data.

- Connects with local servers, cloud storage, and case platforms
- Prepares unstructured data for ingestion into review tools or legal databases
- Automates metadata tagging and matter-specific routing

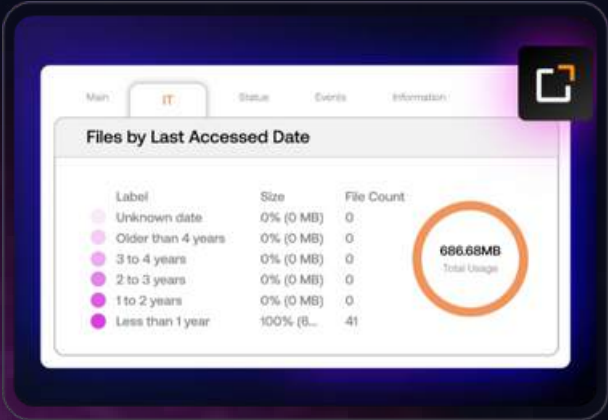

No disruption to existing tools—just faster access to what’s relevant.

Policy-Driven Governance & Compliance Automation

With rising data volumes and growing regulatory complexity, governance is critical. Aparavi brings automation to your compliance strategy.

- Automate legal holds, retention, and defensible disposal
- Maintain complete audit trails and data lineage
- Centralize visibility across all matters and data sources

Reduce cost, protect client trust, and stay ahead of regulatory risk..

Spend less time sorting through messy data and more time making it work for you.
